# ANTHONY CURTIS

## Full-Stack JavaScript(JS) Developer

📞 (310) 874-2582    @ tonydc1997@gmail.com    🔗 https://tonydc1997.github.io/Personal-Website/

# EXPERIENCE

## Full-Stack Developer

**Smart Brain App**

📅 05/2018 - 01/2019
🔗 https://app-smartbrain.herokuapp.com/

Developed a responsive, containerized full-stack web application using Docker, React, ExpressJS, Redis, and Postgres. Utilized machine-learning to allow users to detect faces within images, customize profiles, and maintain users' sessions via session management.

- Designed a RESTful ExpressJS server. Authorized user-data to be stored persistently in an encrypted online database.
- Incorporated Redis and JSON Web Token (JWT) authentication. Empowered users to cache, update and maintain their current profile session.
- UTILIZED: Docker, Redis, NodeJS, ExpressJS, Redis, JWT, Bcrypt, KnexJS, Postgres, REST API, AWS Lambda, Clarifai API, React, React Particles, Jest, Tachyons, ESlint, Prettier, Heroku, Git.

## Front-End Developer

**RoboFriends App**

📅 04/2018 - 02/2019
🔗 https://tonydc1997.github.io/RoboFriends/

Designed a Progressive Web App (PWA) using React and Tachyons to mimic FB's active search feature. Utilized the Robohash API to create robot users.

- Optimized performance as measured by 100% ratings across all metrics (Performance, PWA, Accessibility, SEO, Best Practices), via Google Lighthouse PWA Analysis Tool.
- Integrated Redux into the project. Established potential scalability to hold and store multiple states.
- UTILIZED: React, Redux, Jest, Tachyons, ESlint, Prettier, Google Lighthouse, CircleCI, Git, GH Pages, Robohash API.

## Web Designer / Content Manager

**Zero to Mastery**

📅 04/2018 - 03/2019
🔗 https://zero-to-mastery.github.io/resources/

Contributed and organized additional resources – and improved UI/UX – to an open-source project which lists excellent resources for developers to use as they learn, build, design, and deploy their projects.

- Contributed an MIT License to the project. Qualified it as an official open-source project to a growing roster of 106 contributors.
- Organized and modified additional and existing resources to be clear, concise, and easy to comprehend. Streamlined UI/UX.
- Established responsive, consistent UI/UX. Increased animation speed on interactive elements and matched color palette to the overall theme of the web application.
- UTLIZED: Javascript, CSS3, HTML5, Git.
